<p>| <strong>AEROSPACE</strong> | Aerospace product and parts manufacturing industries (engines, communication systems, navigation systems, electronic devices) | <strong>Discipline develops technologies for use in aviation, defense and space exploration.</strong> |
| Propulsion | Aircraft, missile and space vehicle industries | Anticipate specializing in the development of new technologies or in particular aerospace products. |
| Fluid Mechanics | Communications equipment manufacturers | Stay abreast of status of federal funding for defense and space programs. |
| Thermodynamics | Commercial airlines | Seek knowledge of computer-aided design (CAD) software, robotics, optics and lasers. |
| Structural Design | Research and development firms | Seek co-op or internship opportunities in the aerospace industry. |
| Celestial Mechanics | Federal government: Department of Defense | Develop effective verbal and written communication skills and learn to work well on a team. |
| Acoustics | National Aeronautics and Space Administration | Join chapters of national organizations such as the American Institute of Aeronautics and Astronautics to build a network of professional contacts and participate in design competitions. |
| Guidance and Control Systems | | Note, job prospects in aerospace engineering may be influenced by economic conditions and the demand for military products. |</p>

**BIOSYSTEMS ENGINEERING**

See What can I do with a major in Biosystems Engineering?
## Areas

###CHEMICAL and BIOMOLECULAR
- Bulk and Fine Chemicals
- Consumer Products
- Biotechnology and Pharmaceuticals
- Electronics
- Environmental Safety and Health
- Fuels and Energy Conversion
- Materials
- Process Design

###EMPLOYERS
- Private and national research laboratories
- Industries including: Agricultural chemicals, industrial bulk and fine chemicals, plastics, biotechnology, pharmaceutical, cosmetics, textiles, petroleum, food processing, energy, environmental, automotive, pulp and paper, rubber and rubber products, electronics, consumer products
- Federal government:
  - Department of Energy
  - Environmental Protection Agency
  - Nuclear Regulatory Commission
  - Department of Agriculture

###STRATEGIES
- **Discipline combines chemistry, physics, biology and engineering to solve problems involving the use or production of chemicals and biological systems to develop new materials and processes and to increase efficiency and lower cost.**
- Pursue a strong foundation in fundamentals in lower division classes as well as specialized knowledge for specific career opportunities in upper division classes.
- Develop exceptional communication and interpersonal skills for work on multidisciplinary teams. Attention to detail is crucial.
- Pursue experimental design, data interpretation, and problem solving competence through coursework and research with professors.
- Seek internship or co-op experiences in the chemical engineering field.
- Join professional associations such as American Institute of Chemical Engineers to maintain current knowledge of opportunities in the field.
- Prepare for professional license via review classes.

###CIVIL
- Structural
- Urban Planning
- Construction
- Environmental
- Water Resources
- Transportation
- Geotechnical

###EMPLOYERS
- Construction industry
- Utility companies
- Oil companies
- Telecommunications businesses
- Manufacturing companies
- Railroads
- Airports
- Road construction companies
- Engineering, architectural, consulting companies
- City, state and federal government:
  - Department of Transportation
  - Army Corps of Engineers
  - Federal Aviation Administration
  - Department of Energy

###STRATEGIES
- **Broad discipline providing for communities through development and improvement of services including construction, transportation, city planning, water, energy, pollution.**
- Pursue a strong background of engineering fundamentals as preparation for entering the workforce or graduate school.
- Develop the ability to communicate effectively, as civil engineers are likely to collaborate with professionals in a variety of disciplines.
- Seek experience organizing and directing people and materials through related internships, co-ops, summer jobs and leadership experiences in student organizations.
- Join the American Society of Civil Engineers to participate in projects and activities to increase marketability beyond graduation.
- Note, states may require licensing or registration.

<th>EMPLOYERS</th>
<th>STRATEGIES</th>
</tr>
</thead>
</table>
| **COMPUTER**  |**INDUSTRIES INCLUDING:**  
- Aerospace, automotive, computer and electronics manufacturers, transportation, telecommunications, guidance and control systems, defense, electric power and energy, semiconductor, electronics, environmental, medical equipment, chemical, pharmaceutical, computer, pulp, paper, textile, metal  
- Financial and business service companies  
- Scientific service companies (instruments, lab equipment, software)  
- Technical service companies (intelligence, information systems, defense)  
- Federal government:  
  - Armed forces  
  - National Aeronautics and Space Administration  
  - Federal Bureau of Investigation  
  - National Institute of Standards and Technology  
  - Departments of Defense, Energy, Transportation  
  - National Institutes of Health  
| **ELECTRICAL**  |**INDUSTRIES INCLUDING:**  
- Aerospace, automotive, computer and electronics manufacturers, transportation, telecommunications, guidance and control systems, defense, electric power and energy, semiconductor, electronics, environmental, medical equipment, chemical, pharmaceutical, computer, pulp, paper, textile, metal  
- Scientific service companies (instruments, lab equipment, software)  
- Technical service companies (intelligence, information systems, defense)  
- Federal government:  
  - Armed forces  
  - National Aeronautics and Space Administration  
  - Federal Bureau of Investigation  
  - National Institute of Standards and Technology  
  - Departments of Defense, Energy, Transportation  
  - National Institutes of Health  
| **DISCIPLINE INVOLVES THE DESIGN AND DEVELOPMENT OF COMPUTER HARDWARE AND SOFTWARE AND HARDWARE-SOFTWARE INTEGRATION.**  
- Expect to take classes in engineering fundamentals, math, science and computer science.  
- Develop strong attention to detail, analytical skills and the ability to persevere through lengthy projects.  
- Seek ways to enhance interpersonal, communication and teamwork skills for work with people of differing backgrounds.  
- Join student chapters of organizations such as Institute for Electrical and Electronics Engineers (IEEE) and Association for Computing Machinery (ACM) to build contacts with peers and mentors, participate in student competitions and develop job leads.  
| **BROAD DISCIPLINE APPLIES ENGINEERING PRINCIPLES TO THE DESIGN AND PRODUCTION OF ELECTRONIC SYSTEMS AND ELECTRICAL DEVICES.**  
- Prepare for a course load including engineering fundamentals, math, science and electrical engineering.  
- Pursue design projects and laboratory experience throughout college career.  
- Seek related experience through research, internships, co-ops or part-time employment.  
- Join student chapters of industry organizations such as Institute for Electrical and Electronics Engineers (IEEE) to develop communication and leadership skills, to participate in competitions and to take advantage of professional networking opportunities.
### Engineering Physics

**Areas:**
- Engineering (Process and Testing)
- Quality Control
- Research
- Development
- Instrumentation

**Employers:**
- Industries including: High technology, semiconductor, chemical, aerospace, agriculture, energy, fuel, computer, transportation, healthcare
- National laboratories
- Federal government: Department of Commerce, Department of Defense, National Aeronautics and Space Administration

**Strategies:**
- **Broad interdisciplinary field involves applying physics principles in engineering contexts.**
- Choose a major in engineering physics or supplement physics major with engineering minor; both science and math aptitude are fundamental.
- Seek internship, co-op and/or research experience with professors in area of interest.
- Develop strong oral, written communication and experimental design skills through coursework and laboratory practice.
- Pursue advanced degree in engineering, engineering physics or physics for increased employment opportunities.

### Environmental

**Areas:**
- Air Quality
- Water Quality
- Solid/Water Waste Management
- Toxic Waste Management
- Hazardous Waste Clean-up/Bioremediation
- Industrial hygiene
- Radiation Protection
- Public Health
- Land/Wildlife Management
- Recycling

**Employers:**
- Consulting companies specializing in water/waste water treatment, water resource management, solid and hazardous waste management, air pollution control, hazardous waste remediation
- Industries including: chemical, energy, pharmaceutical, mining and manufacturing
- Local water, sewer, health and public works departments
- Testing laboratories
- Public interest organizations
- Research firms
- Construction companies
- State departments of Environment and Conservation
- Federal government: Department of Energy, Department of Defense, Environmental Protection Agency

**Strategies:**
- **Discipline plays vital role in preventing and developing solutions for environmental problems.**
- Plan to supplement engineering coursework with classes in biology, hydrology, chemistry, geology and computational methods.
- Seek experience in the environmental engineering field through co-ops, internships and part-time positions.
- Develop strong interpersonal and communication skills for interacting with legal and business professionals to solve environmental issues.
- Expect to work outdoors at least part of the time for environmental testing, quality control and site investigation work.
- Join community groups or service organizations such as Student Conservation Association that focus on environmental awareness; attend public meetings about waste management.
- Maintain current knowledge of environmental issues, regulations and statutes.
- Consider membership in professional engineering organizations such as the American Association for Environmental Engineers for networking and job leads.

MECHANICAL

Machine Design
Systems Design
Manufacturing and Production
Energy Conversion
Energy Resources
Transportation and Environmental Impact
Materials and Structures

Industries including:
- Automotive, aerospace, electronics, chemical products, petroleum, textiles, industrial equipment, heating and air conditioning systems
- Utility companies
- National laboratories
- Federal government:
  - Department of Energy
  - Department of Defense
  - Federal Aviation Administration
  - National Aeronautics and Space Administration

Very broad discipline incorporating the research, design, development, manufacturing and testing of mechanical devices.
Learn computer-aided design (CAD) and computer-aided manufacturing (CAM).
Obtain related experience through engineering internships, co-ops or part-time jobs.
Develop strong interpersonal and communication skills; consider a class in public speaking to enhance presentation skills. Plan to collaborate with other types of engineers and with those in industry.
Join student chapter of American Society of Mechanical Engineers to take advantage of mentorship programs, learn more about specialties in the field and participate in design competitions.

NUCLEAR

Electrical Power Reactor Facilities
Nuclear Fuel Cycle Facilities
Nuclear Instrumentation for Industrial Applications
Radioactive Waste Management
Environmental Science
Medical Research and Technology
Space Exploration
Food Supply

Nuclear Utility Companies
Industries including:
- Medical equipment, power equipment, defense, aerospace, environmental, waste management, food preservation
- National laboratories
- Hospitals
- Federal government:
  - Department of Energy
  - National Aeronautics and Space Administration (NASA)
  - Nuclear Regulatory Commission
  - Environmental Protection Agency
  - Department of Homeland Security
  - Department of Defense

Discipline focuses on research and development to derive benefits from nuclear processes.
Develop strong research skills as an undergraduate through coursework, internships or co-ops related to nuclear energy.
Exhibit curiosity, attention to detail, problem-solving skills and perseverance for success in the field.
Travel to some off-site locations including reactors, laboratories or installations sites may be required.
Consider student membership in the American Nuclear Society to learn more about specialties in the field, build contacts and cultivate leadership potential.
GENERAL INFORMATION

- Utilize Sloan Career Cornerstone Center’s website to learn more about opportunities in engineering.
- A bachelor's degree provides a wide range of career opportunities in industry, business and government.
- Bachelor's degree is good background for pursuing technical graduate degrees as well as professional degrees in Engineering, Business Administration, Medicine or Law.
- Graduate degrees offer more opportunities for career advancement, college or university teaching positions.
- Related work experience obtained through co-op, internships, part-time or summer jobs is extremely beneficial.
- Develop excellent verbal and written communications skills including presentation and technical report writing. Learn to work well on a team to maximize collaborations with other engineers and those outside of the profession.
- Develop computer expertise within field.
- Engineers need to think in scientific and mathematical terms and exhibit the abilities to study data, sort out important facts, solve problems and think logically. Creativity is useful.
- Other helpful traits include intellectual curiosity, technical aptitude, perseverance and a basic understanding of the economic and environmental context in which engineering is practiced.
- Because of rapid changes in most engineering fields, both continued education and keeping abreast of new developments are very important.
- Join relevant professional associations, attend meetings, participate in design competitions and stay up-to-date on research/publications.
- All states and the District of Columbia require registration of engineers whose work may affect the life, health or safety of the public.
- Professional or technical societies confer certification in some areas.
- Research Fundamentals of Engineering (FE) exam requirements, as this exam is typically the first step in becoming a Professional Engineer (PE).
- Professional Engineer (PE) licensing guidelines vary by state. Check with the National Council of Examiners for Engineering and Surveying (NCEES) for links to state boards.
- Become familiar with the federal job application and employment procedures.
