</thead>
<tbody>
<tr>
<td><strong>ENERGY (Oil, Coal, Gas, Other Energy Sources)</strong></td>
<td>Petroleum industry including oil and gas exploration, production, storage and waste disposal facilities</td>
<td>Geologists working in the area of energy use various methods to determine where energy sources are accumulated. They may pursue work tasks including exploration, well site operations and mudlogging. Seek knowledge in engineering to aid communication, as geologists often work closely with engineers. Coursework in geophysics is also advantageous for this field.</td>
</tr>
<tr>
<td>Stratigraphy</td>
<td>Coal industry including mining exploration, grade assessment and waste disposal</td>
<td>Gain experience with computer modeling and Global Positioning System (GPS). Both are used to locate deposits.</td>
</tr>
<tr>
<td>Sedimentology</td>
<td>Federal government agencies: National Labs</td>
<td>Many geologists in this area of expertise work with oil and gas and may work in the geographic areas where deposits are found including offshore sites and in overseas oil-producing countries.</td>
</tr>
<tr>
<td>Structural Geology</td>
<td>Department of Energy</td>
<td>This industry is subject to fluctuations, so be prepared to work on a contract basis.</td>
</tr>
<tr>
<td>Geophysics</td>
<td>Bureau of Land Management</td>
<td>Develop excellent writing skills to publish reports and to solicit grants from government, industry and private foundations.</td>
</tr>
<tr>
<td>Geochemistry</td>
<td>Geologic Survey</td>
<td>Obtain leadership experience through campus organizations and work experiences for project management positions.</td>
</tr>
<tr>
<td>Economic Geology</td>
<td>State government</td>
<td></td>
</tr>
<tr>
<td>Geomorphology</td>
<td>Consulting firms</td>
<td></td>
</tr>
<tr>
<td>Paleontology</td>
<td>Well services and drilling companies</td>
<td></td>
</tr>
<tr>
<td>Fossil Energy</td>
<td>Oil field machinery and supply companies</td>
<td></td>
</tr>
<tr>
<td>Hydrogeology</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Some employment areas follow. Many geologists specialize at the graduate level.

| **GEOLOGIC MAPPING** | Federal government agencies: | Geologists interested in geologic mapping collect, process, analyze, translate and disseminate earth-science information through geologic maps. |
| Structural Geology | US Geological Survey | Pursue experience reading maps and interpreting data sources including geological surveys and satellite images. |
| Stratigraphy | Department of Defense | Learn about surveying through part-time jobs, internships or academic opportunities. |
| Sedimentology | Private companies | Develop attention to detail and excellent technical skills to utilize geologic and spatial mapping programs. |
| Geophysics | | |
### AREAS

#### HAZARDS

**ENGINEERING GEOLOGY**
- Seismology
- Volcanology
- Geomorphology

**GEOLOGIC ENGINEERING**
- Civil Engineering
- Environmental Geology
- Structural Geology

#### MINERALS

- Mining Engineering
- Mineralogy
- Geochemistry
- Economic Geology
- Paleontology
- Stratigraphy
- Sedimentology
- Crystallography

### EMPLOYERS

**HAZARDS**

Federal government agencies:
- National Oceanic and Atmospheric Administration
- Geological Survey
- Department of Defense

Private research groups and foundations
Consulting firms

**MINERALS**

Geological exploration firms
Mining companies
Consulting firms

Federal government agencies:
- Geologic Survey
- Office of Surface Mining, Reclamation and Enforcement
- Bureau of Land Management

Railroad companies
Well services and drilling companies

### STRATEGIES

Geologists in this area focus on the detection of hazards such as earthquakes, volcanoes, landslides, floods and tsunamis and the effects of these hazards on the landscape.

Gain experience in technical mapping such as digital terrain modeling; a high degree of computer skills is expected.

Consider an additional major or minor in physics, geophysics and/or engineering; knowledge of engineering is essential.

Prepare to work with teams of scientists and other staff in the field for extended periods.

Research Fundamentals of Engineering (FE) exam requirements, as this is typically the first step in becoming a Professional Engineer (PE).

Geologists who study mineralogy or mining geology area are interested in locating the accumulations of minerals or metals within the earth’s crust.

They may pursue work tasks including exploration, well site operations, mine design, reclamation and groundwater management.

Become familiar with environmental regulations and government permit issues.

Consider specializing in a particular mineral or metal to build an area of expertise.

Secure experience in the field through part-time positions and internships.

Seek opportunities to develop strong technical skills, as mining geologists rely heavily on computerized models to learn about mineral deposits.
Geologists involved in planetary sciences may participate in processing and analyzing data from various missions to bodies in our solar system, assisting in finding potential landing sites for exploration vehicles, mapping neighboring planets and their moons and conducting research to better understand the origins, evolutions and geologic processes operating on these bodies. Explore opportunities for undergraduate research. Work in this area is limited and requires many years of experience and developed research. A Ph.D. is often required. Take additional coursework in physics to specialize in planetary sciences. Pursue internships in national labs with space programs such as The Ames Laboratory, Jet Propulsion Laboratory and Johnson Space Center. Seek experience with remote sensing and Geographic Information Systems (GIS) technologies. Develop extraordinary analytical writing skills for grant writing and research.

Exploration
Teaching Research

Elementary/secondary public or private schools
Colleges and universities
Museums

Explore opportunities for undergraduate research. Develop strong communication skills, both oral and written. Seek volunteer or paid experiences, such as camp counselor or tutor, with target age group. Obtain certification/licensing for public school teaching, which varies by state. Acquire multiple certifications for increased employability in secondary education. Complete a master's degree for community college teaching. Pursue Ph.D. for college/university teaching and research. Grant writing skills are essential in academia.

Federal government agencies:
National Labs
National Aeronautics and Space Association
Geological Survey
GENERAL INFORMATION

- A bachelor's degree is good background for pursuing technical graduate degrees as well as professional degrees in Business Administration, Medicine or Law.
- Within the many facets of geology, there is often overlap of job functions. However, many geologists find advantage in becoming more specialized.
- Gaining experience is very important, and there are many opportunities for students to obtain volunteer, part-time, summer, field camp, internship and/or co-op experiences in various geological areas.
- Possess a love of the outdoors, an interest in nature and a desire to travel.
- Develop physical stamina to work and conduct research in remote areas under various conditions.
- A bachelor's degree may be sufficient for entry-level industry positions.
- A master's degree is often preferred for state survey work, oil industry and for advancement in the field.
- Employment prospects are best for those with master's degrees, familiarity with advanced technologies such as computer modeling and willingness to relocate.
- Maintain a high GPA and secure strong faculty recommendations for admittance to graduate school.
- Research licensure and certification laws by state for pursuing registered geologist credential.
- Obtain experience in mapping and surveying. Develop skills with measuring equipment as well as laboratory equipment and processes.
- Acquire a business background to help in managing projects and assessing economic costs and benefits.
- Join groups directed toward improvement of natural resources, environment and pollution control including professional organizations related to interest area(s).
- Develop exceptional computer skills.
- Learn a foreign language for work in other countries.
- Excellent verbal and written communication skills are essential. The ability to market your skills and write proposals is necessary to maintain steady work. Grants may be necessary to start and continue projects.
